Plagiarism and Generative AI Policy

VMUNC VIII is an academic conference and delegates are expected to deliver original work. That said, any acts of plagiarism on submissions and use of any text/materials by another author without proper accreditation is strictly prohibited. This policy applies to all conference materials, including position papers, speeches, resolutions, amendments, directives, and crisis notes. Using generative AI tools, including ChatGPT, Gemini, Claude, or similar programs, to write, edit, or create conference materials is strictly prohibited. Delegates are allowed to use external information for research, however, any quotations, data, statements or other external materials must be referenced accordingly. VMUNC VIII reserves the right to review submitted work for plagiarism or AI-generated content through available detection tools, document review, citation checks, and other reasonable methods. If a delegate's work is flagged or suspected of violating this policy, committee staff and the Secretariat may review the work, ask the delegate about their writing process, and review document version history when available.

Delegates accused of plagiarism or improper AI use may be given the opportunity to contest the finding by providing evidence. Valid proof can be presented by means of such materials as version history of the document with dates of edits, handwritten notes, outlines, research notes, drafts, or any other materials indicating writing process of the document. Delegates found to have violated this policy may be disqualified from individual awards, removed from consideration for research awards, or face further action at the discretion of the Secretary General. VMUNC VIII's goal is not only to enforce academic integrity, but also to protect the educational purpose of the conference by ensuring delegates complete their own work.
